Reflection

This lab gave me a better understanding of how Agile and Scrum are actually used in a software project. While working with Jira, I learned how to create Epics and User Stories, organize them in the backlog, assign story points, and divide the work into Sprints.

Running the Sprints helped me understand how tasks are tracked in real projects by moving them from To Do → In Progress → Done. I also got to see how comments can be used to keep track of updates and communicate about the work.
The Burndown Chart was useful for seeing how much work was left in a Sprint and how the progress compared with the expected completion rate. The Summary section also helped me get an overall view of the project's progress.

Overall, this lab made the Scrum concepts we learned in class more practical. Instead of just learning the terms, I got to actually use Jira to plan, track, and monitor a project, which made the Agile workflow much easier to understand.
